PetGuru API Document

User

POST User Signup

POST

Post User Signup

https://api.cakes.com/**user/signup**

This endpoint allows you to post user signup.

Request

Form Data Parameters

user_id

REQUIRED

string

user id

password

REQUIRED

string

user password

email

REQUIRED

string

user email

user_name

REQUIRED

string

user's name

Response

● 200: OK

User signup successfully posted.

```
{  "message": "success post signup"}
```

● 409: Conflict

User already registered

```
{  "message": "User is already registered"}
```

● 500: Internal Server Error

Could not post user signup

```
{  "message": "post signup error"}
```

POST User O-Auth Signup

확인 후 수정 필요

POST POST User O-Auth Signup

`https://api.cakes.com/user/auth-signup`

his endpoint allows you to post user O-Auth signup.

Request

Form Data Parameters

user_id

REQUIRED

string

user id

password

REQUIRED

string

user password

email

REQUIRED

string

user email

user_name

REQUIRED

string

user's name

Response

● 200: OK

User O-Auth signup successfully posted.

```
{  "message": "success post auth-signup"}
```

● 500: Internal Server Error

Could not post O-Auth signup

```
{  "message": "post auth-signup error"}
```

POST User Login

POST

POST User Login

https://api.cakes.com/**user/login**

This endpoint allows you to post user login.

Request

Form Data Parameters

user_id

REQUIRED

string

user id

user_password

REQUIRED

string

user password

Response

● 200: OK

User login successfully posted.

```
1 {  "user_id": "Login user's id",  
2    "message": "Success post login"  
3 }
```

● 401: Unauthorized

Could not post a user login.

```
{  "message": "Post login error"}
```

POST User O-Auth Login

확인 후 수정 필요

POST POST User O-Auth Login

`https://api.cakes.com/user/auth-login`

This endpoint allows you to post user login.

Request

Form Data Parameters

`user_id`

REQUIRED

`string`

user id

`user_password`

REQUIRED

`string`

user password

Response

● 200: OK

User O-Auth login successfully posted

```
1 {  "user_id": "Login user's id",  
2    "message": "Success post auth-login"  
3 }
```

● 401: Unauthorized

Could not post O-Auth login

```
{  "message": "Post login error"}
```

POST

<https://api.cakes.com/user/login>

Request

Path Parameters

OPTIONAL

string

Response

● 200: OK

User login successfully posted.

POST User Logout

POST

POST User Logout

https://api.cakes.com/**user/logout**

This endpoint allows you to post user logout.

Request

Form Data Parameters

user_id

REQUIRED

string

user id

Response

● 200: OK

User logout successfully posted.

```
{  "message": "Success post logout"}
```

● 401: Unauthorized

Could not post user logout request

```
{  "message": "Post logout error"}
```

GET User Info

GET Get User Info

`https://api.cakes.com/user/userInfo`

This endpoint allows you to get user information.

Request

Form Data Parameters

`user_id`

REQUIRED

`string`

ID of the user

Response

● 200: OK

User Info successfully retrieved.

```
1  {    "email": "user's email",

7      "created_at": "date and time of user id created",
8      "updated_at": "date and time of user id updated"
9  }
```

● 404: Not Found

Could not find a user info matching this query.

```
{    "message": "Cannot get user info"}
```

PUT User Info Edit

PUT Put User Info Edit

```
https://api.cakes.com/user/userInfo/edit
```

This endpoint allows you to edit user info.

Request

Form Data Parameters

user_id

REQUIRED

string

user id

password

OPTIONAL

string

user password

email

OPTIONAL

string

user email

user_name

OPTIONAL

string

user's name

Response

● 200: OK

User Info successfully edited

```
{  "message": "success put user info edit"}
```

● 404: Not Found

User Info not found

```
{  "message": "User info not found"}
```

GET User Pet Info

GET Get Pet Info

`https://api.cakes.com/user/pet`

This endpoint allows you to get user's pet information.

Request

Form Data Parameters

`user_pet_id`

REQUIRED

`string`

user's pet id

Response

● 200: OK

Pet info successfully retrieved.

```

REQUIRED

string

user id

pet_id

REQUIRED

string

user's pet id

title

REQUIRED

string

title of the question

image_url

OPTIONAL

string

image in the question

video_url

OPTIONAL

string

video in the question

text

REQUIRED

string

text in the question

hashtag

OPTIONAL

string

hashtag

Response

● 200: OK

Q&A question successfully updated

```
{  "message": "success post QNA quesstion"}
```

● 404: Not Found

Could not find info matching this query

```
{  "message": "Could not find pet/user info"}
```

POST

https://api.cakes.com/**qna/question/register**

Request

Path Parameters

OPTIONAL

`string`

Response

● 404: Not Found

Could not find a info matching this query.

DELETE QNA Question

DELETE DELETE QNA Question

`https://api.cakes.com/qna/question/delete`

This endpoint allows you to delete QNA Question.

Request

Form Data Parameters

`question_id`

REQUIRED

`string`

question id

Response

● 200: OK

Question successfully deleted.

```
{  "message": "Successfully deleted Question"}
```

● 404: Not Found

Could not find a question matching this query.

```
{  "message": "Matching question not found"}
```

GET QNA Answer

GET GET QNA Answer

<https://api.cakes.com/qna/answer/list>

This endpoint allows you to get answers for question

Request

Form Data Parameters

question_id

REQUIRED

string

question id for the answer

Response

● 200: OK

QNA Answer list successfully retrieved.

```
1  {    "data": {
2      "QNA Answer List" : [{
3          "answer_id": "answer_id",
4          "user_id": "user_id",

6          "like": "no. of like",
7          "answer_id": "answer_id",
8          "created_at": "date of QNA post created",
9          "updated_at": "date of QNA post updated"
10     }]
11     }
12 }
```

● 404: Not Found

Could not find a QNA Answer list.

```
{    "message": "Could not find a QNA Answer list."}
```

POST QNA Answer

POST POST QNA Answer

`https://api.cakes.com/qna/answer/register`

This endpoint allows you to register new QNA Answer.

Request

Form Data Parameters

question_id

REQUIRED

string

question id for the answer

user_id

REQUIRED

string

mentor user id who wrote answer

body

REQUIRED

string

answer body

Response

● 200: OK

QNA Answer successfully posted

```
{  "message": "success post QNA answer"}
```

● 404: Not Found

Could not find a question matching this query.

```
{  "message": "Could not find matching question"}
```

PUT QNA Answer

PUT PUT QNA Answer

`https://api.cakes.com/qna/answer/update`

This endpoint allows you to update QNA Answer.

Request

Form Data Parameters

question_id

REQUIRED

string

question id for the answer

user_id

REQUIRED

string

mentor user id who wrote answer

body

REQUIRED

string

answer body

Response

● 200: OK

Successfully updated QNA answer

```
{  "message": "successfully updated QNA answer"}
```

● 404: Not Found

Could not find matching question

```
{  "message": "Could not find matching question"}
```

PUT

<https://api.cakes.com/qna/answer/update>

Request

Path Parameters

OPTIONAL

string

Response

● 404: Not Found

Could not find matching question

DELETE QNA Answer

DELETE DELETE QNA Answer

`https://api.cakes.com/qna/answer/delete`

This endpoint allows you to delete QNA Answer

Request

Form Data Parameters

`answer_id`
